July 19, 2025

Dear Betsson Group's recruitment team:

I am writing to express my interest in the Data Engineer position. As a recent graduate in Mathematics from the University of Málaga and passionate about technology, I am motivated to participate in projects related to the development of programs that require problem-solving and analytical-thinking skills.

Throughout my degree in Mathematics, I have learned to use different technologies and programming languages to implement numerical methods and to solve abstract mathematical problems. The programming languages I have mastered have been Scala, Haskell, Java, C++, R and Python, especially the latter. In the last three years, I have worked with Python on a regular basis to develop projects related to the degree, and I have learned to write code in a clean, efficient and organised way to implement complex algorithms and analyse results rigorously. Programming in a language as versatile as Python has given me a strong interest in expanding my knowledge in the field of data engineering, so I am willing to learn to work with any new technologies that could be needed for this position.

I consider myself to be an organised, responsible, energetic and determined person, with excellent learning capacity and communication skills. I am also highly curious and creative and I like to acquire new knowledge in my free time to develop personal projects.

I am very motivated to start building a career in data engineering and I think this position in Betsson Group is a perfect opportunity to do so.

Thank you in advance for considering my application.

Best regards,
David López del Pino
